Sprint 1 Report

•**Actions to stop doing**:
- Stop making really large tasks because it caused a lot of work to piled on one person instead of being more evenly spread out.

•**Actions to start doing**:
- The team should start documenting their code a little bit better. There are many lines of code with very little description of what it does. It helps with understanding what is going on and finding sources of errors.
- Start running tests on the code in isolated environments before committing code. This will allow us to make sure our code builds and runs before adding it in with the rest of the code.

• **Actions to keep doing:**
- The team wants to keep running efficient scrum meetings because it helps keep everything short and concise and updates everybody on what is going on.

• **Work completed**

- User Story 1: 2D image to a 3D image
- User Story 4: Establish the Github

• **Work Not completed**

- User Story 2: Transfer 3D image into a .obj file
- User Story 3: Create an executable

• **Work completion rate:**
- 50% User Story completion
- 50% ideal hours spent
